

2.1 Data Types - Assignment

1. Declare a variable called 'isIsland' and set its value according to your country. The variable should hold a Boolean value. Also declare a variable 'language', but don't assign it any value yet
2. Log the types of 'isIsland', 'population', 'country' and 'language' to the console

Answer:

The screenshot shows a web browser window with a Replit account. The active tab is 'fundamentalAssignm...'. The URL bar shows 'replit.com/@baidya07/fundamentalAssignment2#script.js'. The Replit interface includes a file explorer on the left with 'index.html', 'script.js', and 'style.css'. The main editor shows 'script.js' with the following code:

```
1 let isIsland = false;
2 let language;
3 let country = "Nepal";
4 let population = "28.61 Million";
5
6 console.log(typeof isIsland);
7 console.log(typeof language);
8 console.log(typeof country);
9 console.log(typeof population);
10
```

The console output on the right shows 'Hello world' and the types of the variables: 'boolean', 'undefined', 'string', and 'string'.
