

## Assignment of let, const and var

1. Set the value of 'language' to the language spoken where you live (some countries have multiple languages, but just choose one)
2. Think about which variables should be const variables

The screenshot shows a web development environment with a file explorer on the left, a code editor in the center, and a console on the right. The file explorer shows a project named 'baidya07' with files 'index.html', 'script.js', and 'style.css'. The code editor shows the following JavaScript code in 'script.js':

```
1 const country = 'Nepal';
2 const language = 'Nepali';
3 let population = '28.61 million';
4
5 console.log(country);
6 console.log(language);
7 console.log(population);
```

The console on the right shows the output of the code:

```
>
Nepal
Nepali
28.61 million
```
